

HUSSIEN ABBAS

Flutter Developer | Mobile & Full-Stack Engineer

Aswan, Egypt | abbashussien650@gmail.com | +20 1099911743 / +20 1156049767

PROFESSIONAL SUMMARY

Results-driven Flutter Developer with 3+ years of hands-on experience building scalable, production-ready mobile applications. Delivered 6+ apps across gym management, food delivery, and e-commerce domains, supporting 100+ simulated users with optimized performance on low-end devices. Completed 240+ hours of professional training at NTI and ITI. Actively expanding into Backend Development (Node.js/Express) to become a Full-Stack Engineer. Proficient in Clean Architecture, state management (Bloc/Cubit/Provider), and Firebase integrations.

TECHNICAL SKILLS

Mobile Dev	Flutter & Dart (Advanced), Responsive UI/UX, Complex Animations, Material Design
State Mgmt	Bloc, Cubit, Provider, GetX
Architecture	Clean Architecture, MVVM, OOP, SOLID Principles
Backend & DB	Firebase (Firestore, Auth, Cloud Functions, FCM), RESTful APIs, SQL, Node.js (Learning)
Integrations	Google Maps API, Location Services, Shared Preferences, JSON Parsing
Tools & DevOps	Git/GitHub, CI/CD basics, Postman, Android Studio, VS Code
CS Fundamentals	Data Structures, Algorithms, Cybersecurity, AI/ML (Python, TensorFlow)

PROFESSIONAL EXPERIENCE

Flutter Developer — Lead Project | Anubis Gym Management App 2025

- Architected and delivered a full-scale gym management system with real-time member tracking, automated subscription renewals, and push notification reminders.
- Implemented Bloc state management for predictable, testable app logic, reducing UI bugs by an estimated 40% compared to earlier setState-based approaches.
- Integrated Firebase Cloud Messaging (FCM) to deliver instant workout reminders, achieving 100% notification delivery rate across 100+ simulated user accounts.
- Designed and built a real-time Firestore database schema supporting member profiles, subscription tiers, and attendance logs with sub-100ms query response times.

Flutter Developer | Miss Chef — Homemade Food Marketplace 2025

- Built a two-sided marketplace for home-based food businesses, integrating Google Maps API and Location Services for real-time delivery tracking.
- Optimized image loading pipeline for low-end Android devices, reducing average image render time by ~60% through caching and lazy loading strategies.
- Implemented secure order processing flow with REST API integration, handling end-to-end transaction lifecycle from cart to confirmation.

Flutter Developer | E-Commerce Suite (Coffee & Clothing Stores) 2024

- Developed 2 modular e-commerce apps with reusable UI component libraries, cutting development time for new store variants by approximately 50%.
- Implemented complex product filtering systems and persistent shopping carts using Shared Preferences, maintaining cart state across app sessions.
- Applied Provider state management across both apps, ensuring consistent state flow and clean separation between UI and business logic layers.

Flutter Developer | World Time Tracker 2024

- Built a real-time global time synchronization app consuming 10+ time zone APIs, handling complex Async/Await flows and multi-level JSON parsing with zero data loss.

PROFESSIONAL TRAINING

Mobile Development Intensive Program | **NTI (National Telecommunications Institute)** *Oct 2025 – Nov 2025*

- Completed 120-hour intensive program covering advanced Flutter architectures, performance optimization, and production deployment techniques.
- Mastered Clean Architecture patterns and CI/CD pipelines, reducing build-to-deploy cycles in project simulations.

Flutter Development Internship | **ITI (Information Technology Institute)** *Jan 2025 – Feb 2025*

- Completed 120-hour internship focused on building robust mobile solutions with integrated local (SQL/Shared Preferences) and cloud (Firebase) databases.
- Delivered 2 production-ready apps as part of the program, receiving positive evaluation from ITI technical assessors.

AI & Machine Learning Training | **NTI & Huawei** *Nov 2024 – Dec 2024*

- Applied Python and TensorFlow for data analysis and algorithm design, including an AI route optimization engine achieving efficient pathfinding across simulated datasets.

KEY PROJECTS

Anubis Gym App — Flutter, Firebase, Bloc, FCM

- Full-scale gym management system; 100+ simulated members; real-time tracking + automated subscription renewals.

Miss Chef — Flutter, REST API, Google Maps API

- Homemade food marketplace with live delivery tracking; 60% faster image load on low-end devices.

AI Route Optimization — Python, TensorFlow

- Graph-based pathfinding engine using TensorFlow; applied to logistics and hospital navigation scenarios.

Cybersecurity Encryption System — C++, SQL

- Secure medical data encryption system for hospital environments, protecting sensitive patient records using C++ cryptographic implementation backed by SQL storage.

EDUCATION

Bachelor of Science in Computer Science — *Expected 2026*

Arab Academy for Science, Technology & Maritime Transport, Egypt

LANGUAGES

Arabic: Native **English:** Intermediate — Technical Proficiency
